CYCLE REPORT

Shrimply Demo Farm | Cycle 3

DESIGN PREVIEW - ILLUSTRATIVE DATA

1. CYCLE OVERVIEW

CYCLE NAME	START DATE	END DATE	PONDS / AREA
Cycle 3	15 Jan 2026	12 May 2026	4 ponds / 12,000 m2

TOTAL HARVESTED BIOMASS

48,650 kg

Recorded partial and final harvests

TOTAL HARVESTED REVENUE

Rp 2,432,500,000

Recorded harvest sales

TOTAL RECORDED CYCLE COST

Rp 1,714,000,000

Feed, additives, maintenance and general

ESTIMATED GROSS PROFIT

Rp 718,500,000

Revenue minus recorded cycle costs

CYCLE OUTCOME SUMMARY

Cycle 3 included four ponds across 12,000 m2. Recorded harvests produced **48,650 kg** and generated **Rp 2.43 billion** in revenue. Recorded cycle costs totalled **Rp 1.71 billion**, resulting in an estimated gross profit of **Rp 718.5 million**. One pond was closed because of disease and is reported separately from completed final harvests.

FACTUAL PERFORMANCE HIGHLIGHTS

Highest harvested biomass	**Pond A1**	**13,480 kg**
Highest actual survival	**Pond A1**	**89.4%**
Lowest actual FCR	**Pond A1**	**1.36**
Non-harvest closures	**Pond B2**	**Disease**

DESIGN PREVIEW - ILLUSTRATIVE DATA

2. POND PERFORMANCE

TOTAL BIOMASS	HARVESTED POPULATION	OVERALL ACTUAL SR / FCR
48,650 kg	2,133,500	87.6% / 1.39

HARVESTED PONDS

Pond	Supplier	DOC	Final MBW	Harvested biomass	Harvested population	Actual SR	Actual FCR
A1	Nusantara Hatchery	117	24.3 g	13,480 kg	554,700	89.4%	1.36
A2	Vannamei Prime	116	23.8 g	12,120 kg	509,200	86.4%	1.42
B1	Nusantara Hatchery	114	22.9 g	13,050 kg	569,900	87.0%	1.39
Harvested pond subtotal				**38,650 kg**	**1,633,800**		

NON-HARVEST CLOSURES

DISEASE

Pond B2

Supplier: Vannamei Prime

DOC AT CLOSURE	LAST SAMPLED MBW	PARTIAL HARVEST	HARVESTED POPULATION
110	18.4 g	10,000 kg	499,700

CALCULATION BASIS

Final harvest MBW: Taken only from the pond's Final Harvest record. Partial harvest MBW does not replace the pond MBW.

Harvested biomass and population: Sum of every Partial and Final Harvest linked to the pond cycle.

Actual survival rate: Total harvested population divided by initial stocked population.

Actual FCR: Recorded feed consumed divided by net harvested biomass gain.

Overall SR and FCR: Calculated from combined production totals, not a simple average of pond percentages.

DESIGN PREVIEW - ILLUSTRATIVE DATA

3. COST AND PROFITABILITY

RECORDED CYCLE COST BREAKDOWN

Category	Amount	Share of total
Feed cost	Rp 1,120,000,000	65.3%
Additive cost	Rp 184,000,000	10.7%
Maintenance cost	Rp 236,000,000	13.8%
General expenses	Rp 174,000,000	10.2%
Total recorded cost	**Rp 1,714,000,000**	**100.0%**

COST COMPOSITION

PROFITABILITY SUMMARY

REVENUE	TOTAL COST	GROSS PROFIT	GROSS MARGIN
Rp 2,432,500,000	Rp 1,714,000,000	Rp 718,500,000	29.5%

UNIT ECONOMICS

COST PER KG	REVENUE PER KG	PROFIT PER KG
Rp 35,231	Rp 50,000	Rp 14,769

CALCULATION BASIS

Estimated gross profit equals recorded harvest revenue minus recorded cycle-linked costs. Cost per kg, revenue per kg and profit per kg use total harvested biomass as the denominator. Unrecorded or unlinked expenses are not included.
