PRIORITY REVIEW AND NEXT ACTION

- **Closure review**
  1 non-harvest closure recorded.
  Review the recorded cause and prevention steps before the next stocking.

Review signals use screening levels, not farm targets. Strong: survival 85% or higher, FCR 1.50 or lower, margin 20% or higher, and sampling coverage 90% or higher.

CALCULATION BASIS

Final harvest MBW: Latest Final Harvest only; Partial Harvest MBW does not replace pond MBW.
Average MBW: Biomass-weighted average across all Partial and Final Harvest records.
Harvest totals: Sum of every Partial and Final Harvest linked to the pond cycle.
Actual SR: Harvested population divided by initial stocked population.
Actual FCR: Recorded feed consumed divided by net harvested biomass gain.
